

Organics Trailer Tote Dumper

IN A WORLD OF TRAILERS,
TRAVIS LEADS.

The Travis® tote dumper has been in production for years, serving the rendering and grease industries.

Recently, the tote dumper has been servicing a new initiative for customers who are diverting food waste from their landfill waste stream to a composting facility. The result is a reduction in waste costs and use of landfill space for the waste generator and beneficial organic compost by-products that benefit all of us.

Travis® is partnering with waste management companies, environmental companies, and trucking companies to carry out this new initiative with our new lightweight, all-aluminum, self-loading and unloading trailer design.
